## **OPERATION AND PARTS MANUAL**

# WHITEMAN SERIES MODEL HTH44T RIDE-ON POWER TROWEL (KUBOTA V1505 DIESEL ENGINE)

Revision #8 (03/27/12)

To find the latest revision of this publication, visit our website at: www.multiquip.com

THIS MANUAL MUST ACCOMPANY THE EQUIPMENT AT ALL TIMES.

#### **CALIFORNIA** — Proposition 65 Warning

Engine exhaust and some of its constituents, and some dust created by power sanding, sawing, grinding, drilling and other construction activities contains chemicals known to the State of California to cause cancer, birth defects and other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks.
- Cement and other masonry products.
- Arsenic and chromium from chemically treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: <u>ALWAYS</u> work in a well ventilated area, and work with approved safety equipment, such as dust masks that are specially designed to filter out microscopic particles.

# **AWARNING**

#### **SILICOSIS WARNING**

Grinding/cutting/drilling of masonry, concrete, metal and other materials with silica in their composition may give off dust or mists containing crystalline silica. Silica is a basic component of sand, quartz, brick clay, granite and numerous other minerals and rocks. Repeated and/or substantial inhalation of airborne crystalline silica can cause serious or fatal respiratory diseases, including silicosis. In addition, California and some other authorities have listed respirable crystalline silica as a substance known to cause cancer. When cutting such materials, always follow the respiratory precautions mentioned above.

## **AWARNING**

#### RESPIRATORY HAZARDS

Grinding/cutting/drilling of masonry, concrete, metal and other materials can generate dust, mists and fumes containing chemicals known to cause serious or fatal injury or illness, such as respiratory disease, cancer, birth defects or other reproductive harm. If you are unfamiliar with the risks associated with the particular process and/or material being cut or the composition of the tool being used, review the material safety data sheet and/or consult your employer, the material manufacturer/supplier, governmental agencies such as OSHA and NIOSH and other sources on hazardous materials. California and some other authorities, for instance, have published lists of substances known to cause cancer, reproductive toxicity, or other harmful effects.

Control dust, mist and fumes at the source where possible. In this regard use good work practices and follow the recommendations of the manufacturers or suppliers, OSHA/NIOSH, and occupational and trade associations. Water should be used for dust suppression when wet cutting is feasible. When the hazards from inhalation of dust, mists and fumes cannot be eliminated, the operator and any bystanders should always wear a respirator approved by NIOSH/MSHA for the materials being used.

## PARTS ORDERING PROCEDURES

# Ordering parts has never been easier! Choose from three easy options:

Effective: January 1st, 2006

## Best Deal! S Order via Internet (Dealers Only):

Order parts on-line using Multiquip's SmartEquip website!

- View Parts Diagrams
- Order Parts
- Print Specification Information

If you have an MQ Account, to obtain a Username and Password, E-mail us at: parts@multiquip.com.

To obtain an MQ Account, contact your District Sales Manager for more information.

Goto www.multiquip.com and click on

Order Parts to log in and save!

Use the *internet* and qualify for a **5% Discount** on *Standard orders* for all orders which include complete part numbers.\*

Note: Discounts Are Subject To Change

#### Order via Fax (Dealers Only):

All customers are welcome to order parts via Fax. **Domestic (US) Customers dial:** 

1-800-6-PARTS-7 (800-672-7877)

Fax your order in and qualify for a 2% Discount on Standard orders for all orders which include complete part numbers.\*

Note: Discounts Are Subject To Change

**Order via Phone:** 

Domestic (US) Dealers Call:

1-800-427-1244

#### **Non-Dealer Customers:**

Contact your local Multiquip Dealer for parts or call 800-427-1244 for help in locating a dealer near you.

International Customers should contact their local Multiquip Representatives for Parts Ordering information.

## When ordering parts, please supply:

- □ Dealer Account Number
- Dealer Name and Address
- ☐ Shipping Address (if different than billing address)
- □ Return Fax Number
- ☐ Applicable Model Number
- Quantity, Part Number and Description of Each Part
- Specify Preferred Method of Shipment:
  - ✓ UPS/Fed Ex
- ✓ DHL ✓ Truck
- Priority One
- Ground■ Next Day
- Second/Third Day

#### **NOTICE**

All orders are treated as *Standard Orders* and will ship the same day if received prior to 3PM PST.

www.multiquip.

## HTH44T—TRAINING CHECKLIST

#### TRAINING CHECKLIST

This checklist will lists some of the minimum requirements for machine maintenance and operation. Please feel free to detach it and make copies. Use this checklist whenever a new operator is to be trained or it can be used as a review for more experienced operator's.

TRAINING CHECKLIST			
NO.	DESCRIPTION	OK?	DATE
1	Read Operator's Manual completely.		
2	Machine layout, location of components, checking of engine and hydraulic oil levels.		
3	Fuel system, refueling procedure		
4	Operation of spray and lights (if equipped).		
5	Operation of controls (machine not running).		
6	Safety controls, seat kill switch operation.		
7	Emergency stop procedures.		
8	Startup of machine, pre-heat (Kubota), engine choke.		
9	Maintaining a hover.		
10	Maneuvering		
11	Pitching		
12	Matching blade pitch between towers. Twin Pitch™		
13	Concrete finishing techniques.		
14	Shutdown of machine.		
15	Lifting of machine (lift loops).		
16	Machine transport and storage.		

Operator	Trainee
COMMENTS:	

## HTH44T— DAILY PRE-OPERATION CHECKLIST

#### **DAILY PRE-OPERATION CHECKLIST**

DAILY PRE-OPERATION CHECKLIST		
1	Engine oil level.	
2	Hydraulic oil level.	
3	Radiator coolant level.	
4	Condition of blades.	
5	Blade pitch operation.	
6	Kill switch (seat) operation.	
7	Steering control operation.	

COMMENTS:

## HTH44T— SAFETY MESSAGE ALERT SYMBOLS

#### FOR YOUR SAFETY AND THE SAFETY OF <u>OTHERS!</u>

Safety precautions should be followed at all times when operating this equipment. Failure to read and understand the Safety Messages and Operating Instructions could result in injury to yourself and others.

#### NOTE

This Owner's Manual has been developed to provide complete instructions for the safe and efficient operation of the MQ Whiteman HTH44T Ride-On Power Trowel. For engine maintenance information, please refer to the engine manufacturers instructions for data relative to its safe operations.

Before using this Ride -On Power Trowel, ensure that the operating individual has read and understands all instructions in this manual.

#### SAFETY MESSAGE ALERT SYMBOLS

The three (3) Safety Messages shown below will inform you about potential hazards that could injure you or others. The Safety Messages specifically address the level of exposure to the operator, and are preceded by one of three words: **DANGER**, **WARNING**, or **CAUTION**.

**DANGER:** You **WILL** be **KILLED** or SERIOUSLY injured if you **DO NOT** follow directions.

**WARNING:** You **CAN** be **KILLED** or SERIOUSLY injured if you **DO NOT** follow directions.

**CAUTION:** You **CAN** be injured if you **DO NOT** follow directions.

Potential hazards associated with HTH44T Ride-on Power Trowel operation will be referenced with Hazard Symbols which appear throughout this manual, and will be referenced in conjunction with Safety Message Alert Symbols.

#### HAZARD SYMBOLS

#### Lethal Exhaust Gases

Engine exhaust gases contain poisonous carbon monoxide. This gas is colorless and odorless, and can cause death if inhaled. **NEVER** operate this equipment in a confined area or enclosed structure that does not provide ample free flow air.

#### **Explosive Fuel**

Gasoline is extremely flammable, and its vapors can cause an explosion if ignited. DO NOT start the engine near spilled fuel or combustible fluids. DO NOT fill the fuel tank while the engine is running or hot. DO NOT overfill tank, since spilled fuel could ignite if it comes into contact with hot engine parts or sparks from the ignition system. Store fuel in approved containers, in well-ventilated areas and away from sparks and flames. NEVER use fuel as a cleaning agent.

#### **Burn Hazards**

Engine components can generate extreme heat. To prevent burns, **DO NOT** touch these areas while the engine is running or immediately after operations. **NEVER** operate the engine with heat shields or heat guards removed.

#### **Rotating Parts**

**NEVER** operate equipment with covers, or guards removed. Keep fingers, hands, hair and clothing away from all moving parts to prevent injury.

## HTH44T— SAFETY MESSAGE ALERT SYMBOLS

#### **Accidental Starting**

**ALWAYS** place the ON/OFF switch in the OFF position, and remove the key.

#### **Respiratory Hazard**

**ALWAYS** wear approved respiratory protection.

#### **Over Speed Conditions**

**NEVER** tamper with the factory settings of the engine governor or settings. Personal injury and damage to the engine or equipment can result if operating in speed ranges above maximum allowable.

#### Sight and Hearing hazard

**ALWAYS** wear approved eye and hearing protection.

This Ride-On Power Trowel, other property, or the surrounding environment could be damaged if you do not follow instructions.

#### **Equipment Damage Messages**

Other important messages are provided throughout this manual to help prevent damage to your trowel, other property, or the surrounding environment.

## **HTH44T— RULES FOR SAFE OPERATION**

#### **CAUTION**

Failure to follow instructions in this manual may lead to serious injury or even death! This equipment is to be operated by **trained** and **qualified** personnel only! This equipment is for industrial use only and should not be regarded as a toy.

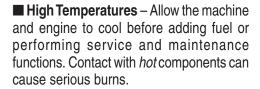

The following safety guidelines should always be used when operating the HTH44T Ride-on Power Trowel:

#### **GENERAL SAFETY**

- **DO NOT** operate or service this equipment before reading this entire manual.
- This equipment should not be operated by persons under 18 years of age.
- DO NOT operate this equipment unless all guards and safety devices are attached and in place.
- **ALWAYS** use proper *heavy* lifting techniques when moving equipment. This ride-on trowel is very heavy. It should be lifted only with a lifting device (i.e. crane, forklift, etc.) with a lifting capacity of at least one ton.
- **ALWAYS** check to make sure that the operating area is clear before starting the engine.
- ALWAYS test the safety *kill switch* before operating the equipment.
- **NEVER** place your feet inside the guard rings while starting or operating this equipment.
- **NEVER** operate this equipment without proper *protective* clothing, shatterproof glasses, steel-toed boots and other protective devices required by the job. Avoid wearing jewelry or loose fitting clothing that may snag on the controls or moving parts, this can cause a serious injury.
- **ALWAYS** keep clear of rotating or moving parts while operating this equipment.
- **NEVER** leave the machine *unattended* while running.
- ALWAYS refuel in a well-ventilated area, away from sparks and open flames.
- ALWAYS use extreme caution when working with flammable liquids. When refueling, stop the engine and allow it to cool. DO NOT smoke around or near the machine. Fire or explosion could result from flames or sparks, or if fuel is spilled on a hot engine.
- Moving Parts Shut down the engine before performing service or maintenance functions. Contact with moving parts can cause serious injury.

**Emergencies** 

■ ALWAYS know the location of the nearest *fire extinguisher* and *first aid kit*. Know the location of the nearest telephone. Also know the phone numbers of the nearest *ambulance*, *doctor* and *fire department*. This information will be invaluable in the case of an emergency.

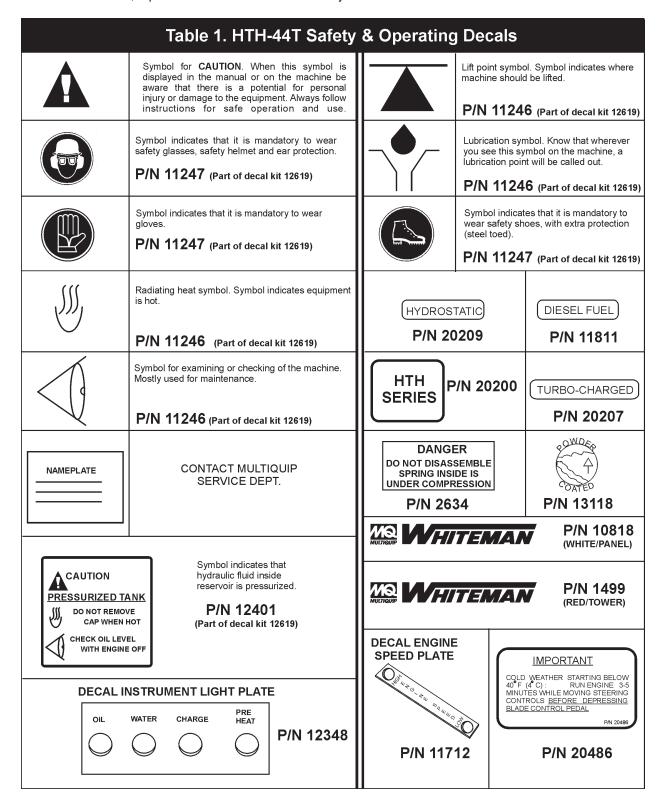

#### **Maintenance Safety**

- Disconnect the battery and spark plug wires before attempting any type of service.
- Securely support any machine components that must be raised.
- **NEVER** lubricate components or attempt service on a running machine.
- **ALWAYS** allow the machine a proper amount of time to cool before servicing.
- Keep the machinery in proper running condition.
- Make sure that there is no buildup of concrete, grease, oil or debris on the machine.
- Fix damage to the machine immediately and always replace broken parts.
- Dispose of hazardous waste properly. Examples of potentially hazardous waste are used motor oil, fuel and fuel filters.
- **DO NOT** use food or plastic containers to dispose of hazardous waste.
- **DO NOT** pour waste, oil or fuel directly onto the ground, down a drain or into any water source.

## **HTH44T— OPERATION AND SAFETY DECALS**

#### **Machine Safety Decals**

The HTH44T series Ride-on Power Trowel is equipped with a number of safety decals. These decals are provided for operator safety and maintenance information. Table 1 below illustrates these decals as they appear on the machine. Should any of these decals become unreadable, replacements can be obtained from your dealer.

## **HTH44T—SPECIFICATIONS**

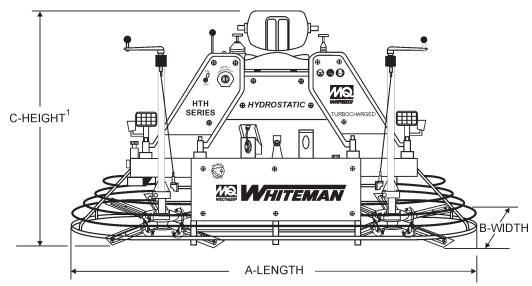

Figure 1. HTH44T Dimension /Specifications

Table 2. HTH-44T Specifications		
A-Length - in. (cm)	96.00 (243.8)	
B-Width - in. (cm)	50.0 (127)	
C-Height - in. (cm)1	56.0 (142)	
Weight – lbs. (kgs.) Operating	1,545 (700)	
Weight – lbs. (kgs.) Shipping	1,848 (838)	
Sound Pressure – dBA <sup>2</sup>	TBA	
Vibration – $ft/s^2$ (m/ $s^2$ ) <sup>3</sup>	TBA	
Blade Tip Speed – FPM (m/s)	1924 (9.9)	
Engine – H.P.	44	
Fuel Tank – gallons (liters)	12 (45)	
Rotor – RPM	0 to 160	
Path Width – in. (cm)	92 (233)	
Hydraulic Oil⁴	AW MV 68	
Engine	Kubota Diesel V1505-TE	

#### NOTE:

- 1. This value includes the seat height.
- 2. Sound pressure is a weighted measure. Measured at the operators ear position while the ride-on trowel is operating at full throttle on concrete in a manner most often experienced in "*normal*" circumstances. Sound pressure may vary depending upon the condition of the concrete. Hearing protection is always recommended.
- The vibration level indicated is the maximum RMS (Root Mean Square) value obtained at the handle grip while operating the ride-on trowel on curing concrete in a

manner

most often experienced in "*normal*" circumstances. Values were obtained from all three axes of motion. The values shown represent the maximum RMS value from these measurements.

4. "AW" stands for anti-wear and "MV" stands for multi-viscosity. The 68 refers to the general viscosity range and is similar to 10W-30-motor oil. It is recommended that AW MV 68 hydraulic oil be used. If this type of hydraulic oil is not available then use 10W-30.

## **HTH44T— GENERAL INFORMATION**

#### HTH44TRIDE-ONTROWEL FAMILIARIZATION

The HTH44T series Ride-On Power Trowels are designed for the floating and finishing of concrete slabs.

Take a walk around the HTH44T Ride-On Power Trowel. Take notice of all the entire major components (see Figures 2 and 3, pages 14 and 15) like the engine, blades, pitch towers, air cleaner, ignition switch etc. Check that there is always oil in the engine, and hydraulic oil in the hydraulic oil reservoir.

Read all the safety instructions carefully. Safety instructions will be found throughout this manual and on the machine. Keep all safety information in good, readable condition. Operators should be well trained on the operation and maintenance of the HTH44T Ride-On Power Trowel.

Before using your HTH44T Ride-On Power Trowel, test it on a flat watered down section of finished concrete. This trial test run will increase your confidence in using the trowel and at the same time it will familiarize you with the trowel's controls and indicators. In addition you will understand how the trowel will handle under actual conditions.

#### **Engine**

The HTH44T Ride-On Power Trowel is available with a standard V1505-TE Kubota diesel engine. Refer to the engine owner's manual for specific instructions regarding engine operation. This manual is included with the ride-on trowel at the time of shipping from Whiteman. Please contact your nearest Multiquip Dealer for a replacement should the original manual disappear.

#### **Blades**

The blades of the Ride-on Power Trowel finish the concrete as they are swirled around the surface. Blades are classified as float (10 or 8 inches wide), and finish (6 inches wide). The HTH44T is equipped with five blades per rotor equally spaced in a radial pattern and attached to vertical rotating shaft by means of a *spider assembly*.

#### **Hydraulic Motor**

Independent hydrostatic drive motors are coupled to the engine-powered hydrostatic pumps. Each motor drives a spider assembly.

#### **Hydraulic Steering**

Dual joystick controls located to the left and right of the operator are provided for steering the HTH44T Ride-on Power Trowel. The joysticks are linked to three hydraulic steering cylinders located within the frame of the machine. When the right side steering joystick is moved either forward or backward it will cause that side of the Ride-on Power Trowel to move in either a forward or reverse direction. Moving the same joystick left or right causes the trowel to move in either the left or right direction.

When the left side steering joystick is moved, it will cause the left side of the Ride-on Power Trowel to travel in either a forward or reverse direction.

#### **Hydraulic Pump**

Delivers a continuous controlled flow of hydraulic fluid to the hydraulic motors.

#### CAUTION

This Ride-on Power Trowel is very *heavy* and awkward to move around. Use proper heavy lifting procedures and **DO NOT** attempt to lift the Ride-on Power Trowel by the guard rings

#### **Moving the Ride-On Trowel**

The HTH44T series Ride-on Power Trowel is designed to be moved and handled several ways. The easiest way to lift the ride-on trowel is to utilize the lift loops that are welded to the frame. These lift loops are located to the left and right sides of the operator's seat (Figure 3, Page 15).

A strap or chain can be attached to these lift loops, allowing a forklift or crane to lift the Ride-on Power Trowel up onto a slab of concrete. The strap or chain should have a minimum 2,000 pounds (1000-kg) lifting capacity and the lifting gear must be capable of lifting at least this amount.

#### Training

For proper training, please use the "**TRAINING CHECKLIST**" located in the front of this manual (Page 6). This checklist will provide an outline for an experienced operator to provide training to a new operator

## HTH44T— CONTROLS AND INDICATORS

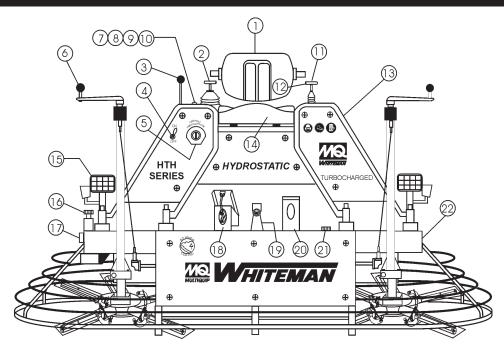

Figure 2. HTH44T Controls and Indicators (Front)

Figures 2 and 3 (pages 12 and 13) show the location of the controls, indicators and general maintenance parts. The function of each control, indicator or maintenance part is explained below:

- **Seat** Place for operator to sit. Engine will not start unless operator is seated. Seat is adjustable.
- **2. Steering Control (right side)** -Allows the unit to move in either a forward, reverse left or right direction.
- Throttle Control Lever Controls the speed of the engine. Move the hand lever forward to increase engine speed (high), backwards to decrease engine speed (low).
- **4. Light Switch** When activated, turns on six halogen lights. Lights offer better visibility when working indoors.
- **5. Ignition Switch –** With key inserted turn clockwise to start engine.
- **6. Twin Pitch Control** Both pitch towers are linked together. One crank may be turned to adjust the blade pitch simultaneously or individually control for each set of blades.
- Pre-Heat Indicator Light Lights blue during engine start-up. Indicates that engine glow plugs are being preheated. Light will go off after approximately 10 seconds.
- **8.** Charge Indicator Light Lights red when electrical system is not charging properly.
- **9. Water Indicator Light** Lights red when water temperature is high.

- **10. Oil Indicator Light -** Lights red when oil pressure is low.
- **11. Steering Control (left side)** -Allows the unit to move in a forward or reverse direction only.
- **12. Retardant Spray Control Button** When pressed allows retardant spray to flow through the spray nozzle located at the front of the machine.
- **13.** Radiator/Filler Cap –Holds coolant or water necessary to keep engine at a safe operating temperature. Remove this cap to add water or antifreeze.
- **14. Kill Switch** Shuts down engine when operator is not sitting in seat.
- **15. Lights** Low voltage halogen light.
- **16. Hydraulic Oil Filler Cap** Remove this cap to add hydraulic oil.
- **17. Hydraulic Oil Sight Glass** Indicates the level of the hydraulic oil in the reservoir.
- 18. Right Foot Pedal Controls blade speed. Slow blade speed is accomplished by slightly depressing the foot pedal. Maximum blade speed is accomplished by fully depressing the foot pedal.
- 19. Spray Nozzle Spray nozzle for retardant.
- **20.** Left Foot Riser Operator foot rest pedal.
- **21.** Fuel Gauge/Filler Cap Indicates the amount of fuel in the fuel tank. Remove this cap to add fuel.
- **22. Hydraulic Reservoir** Part of frame. Holds hydraulic oil necessary for pump operation.

## **HTH44T— CONTROLS AND INDICATORS**

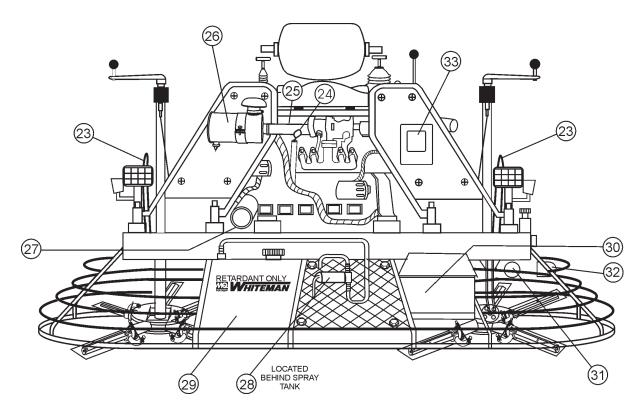

Figure 3. HTH44T Controls and Indicators (Rear)

- 23. Lift Loops –Located on both the left and right sides of the main frame. Used when the trowel must be lifted onto a concrete slab.
- **24. Engine Oil Dipstick** Indicates engine oil level.
- **25. Engine Oil Filler Cap -** Remove this cap to add engine oil.
- **26. Air Filter** Prevents dirt and other debris from entering the fuel system.
- 27. Oil Filter Provides oil filtering for the engine.
- **28. Retardant Spray Motor** Used with the spray control button.

#### NOTE

Read this entire instruction manual completely before attempting to operate this machine.

- Retardant Spray Tank Holds 5 gallons of retardant or water.
- **30. Battery -** Provides +12V DC power to the electrical system.
- **31. Hydraulic Suction Filter -** Filters hydraulic fluid prior to entering the system.
- **32. Hydraulic Return Filter -** Filters hydraulic returning to reservoir.
- **33. Documentation Box -** Contains information regarding the trowel.

#### NOTE

The following section is intended as a basic guide to the Ride-On Power Trowel operation, and is not to be considered a complete guide to concrete finishing. It is strongly suggested that all operators (experienced and novice) read "Slabs on Grade" published by the American Concrete Institute, Detroit Michigan.

## HTH44T—INITIAL START-UP

This section is intended to assist the operator with the initial start-up of the HTH44T series Ride-On Power Trowel. It is extremely important that this section be read carefully before attempting to use the trowel in the field.

**DO NOT** use your Ride-On Power Trowel until this section is thoroughly understood

#### **CAUTION**

Failure to understand the operation of the HTH44T series Ride-On Power Trowel could result in severe damage to the trowel or personal injury.

See Figures 2 and 3 (Pages 12 and 13) for the location of any control or indicator referenced in this manual.

#### **Engine Oil**

- 1. Pull the engine oil dipstick from its holder.
- 2. Determine if engine oil is low (Figure 4), add correct amount of engine oil to bring oil level to a normal safe level.

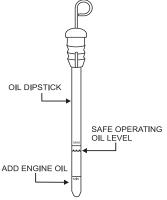

Figure 4. Engine Oil Dipstick

#### Hydraulic Oil

1. Determine if the hydraulic oil is low by observing the level of oil in the hydraulic Oil Sight Glass (Figure 5).

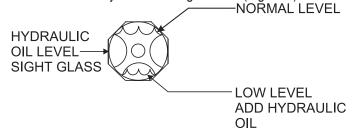

Figure 5. Hydraulic Oil Sight Glass

#### Fuel

1. Determine if the engine fuel is low (Figure 6). If fuel level is low, remove the fuel filler cap and fill with diesel fuel. Handle fuel safely. Motor fuels are highly flammable and can be dangerous if mishandled. **DO** 

**NOT** smoke while refueling. **DO NOT** attempt to refuel the ride-on trowel if the engine is hot or running.

Figure 6. Fuel Gauge

#### **CAUTION**

**NEVER** store the Ride-On Power Trowel with fuel in the tank for any extended period of time. **ALWAYS** clean up spilled fuel immediately.

#### Starting the Engine

 With one foot on the ground and the other foot placed on the trowel's platform, grab hold of any part of the frame and lift yourself onto the trowel. Then sit down in the operator's seat

#### **CAUTION**

**DO NOT** grab hold of the joysticks or pitch tower assemblies to lift yourself onto the trowel. Pulling on the joysticks or pitch towers assemblies repeatedly will weaken the units. Use any part of the frame to lift yourself on the trowel.

2. The Whiteman Ride-On Power Trowel is equipped with a safety *kill switch*. This switch is located beneath the seat assembly. Remember the engine will not start unless an operator is sitting in the operator's seat. The weight of an operator depresses an electrical switch, which will allow the engine to start.

#### **CAUTION**

**NEVER** disable or disconnect the kill switch. It is provided for the operators' safety and injury may result if it is disabled, disconnected or improperly maintained.

## HTH44T— INITIAL START-UP

#### CAUTION

**NEVER** operate the trowel in a confined area or enclosed area structure that does not provide ample free flow of air.

**ALWAYS** wear approved eye and hearing, protection before operating the ride-on; power trowel.

**NEVER** place hands or feet inside the guard rings while the engine is running. **ALWAYS** shut the engine down before performing any kind of maintenance service on the trowel.

- 3. It is recommended that the kill switch be used to stop the engine after every use. Doing this will verify that the switch is working properly and presents no danger to the operator. Remember to turn the key to the "OFF" position after stopping the machine. Not doing so may drain your units' battery
- 4. Place the *engine throttle lever (*Figure 7) in the *LOW* position.

Figure 7. Engine Throttle Control Lever (Low)

5. Insert the *ignition key* into the ignition switch (Figure 8).

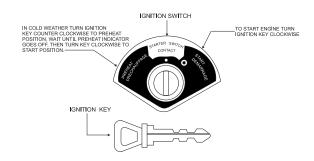

Figure 8. Ignition Switch and Key

6. Turn the ignition key clockwise to the (start) position. The *oil* and **charge** indicator lights (Figure 9) should be on.

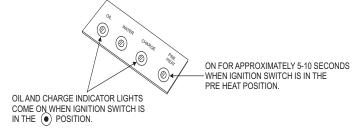

Figure 9. Oil and Charge Indicator Lights

#### NOTE

In *cold* weather turn the ignition key counter clockwise to the preheat position, wait until the **BLUE** preheat indicator goes off before turning the ignition key clockwise to the start position. Two or three preheat cycles may be necessary in very cold weather.

#### **IMPORTANT**

COLD WEATHER STARTING BELOW 40°F (4°C): RUN ENGINE 3-5 MINUTES WHILE MOVING STEERING CONTROLS BEFORE DEPRESSING BLADE CONTROL PEDAL

P/N 20486

## HTH44T—INITIAL START-UP

- 7. Turn ignition key fully clockwise and listen for engine to start. Once engine has started release ignition key. Let engine warm for a few minutes.
- 8. Place the *engine throttle lever* (Figure 10) in the *HIGH* position.

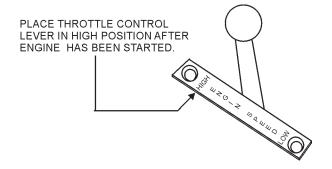

Figure 10. Engine Throttle Control Lever (High)

- 9. The engine should be running at full RPM.
- 10. Repeat this section a few times to get fully acquainted with the engine starting procedure.

# NOTE All directional references with respect to the joysticks are from the *operator's* seat position.

#### Steering

Two joysticks (Figures 11 and 12) located to the left and right of the operator's seat provide directional control for the HTH44T Ride-On Power Trowel. Table 3 illustrates the various directional positions of the joysticks and their effect on the ride-on trowel.

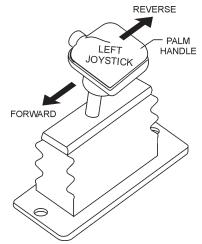

Figure 11. Left Joystick Control

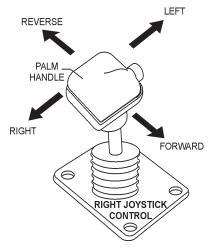

Figure 12. Right Joystick

Table 3. Joystick Directional Positioning			
JOYSTICK	DIRECTION	RESULTS	
Left	Move Joystick Forward	Causes only the left side of the ride-on trowel to move forward.	
Left	Move Joystick Backward	Causes only the left side of the ride-on trowel to move backward.	
Right	Move Joystick Forward	Causes only the right side of the ride-on trowel to move forward.	
Right	Move Joystick Backward	Causes only the right side of the ride-on trowel to move backward.	
Left and Right	Move Both Joysticks Forward	Causes the ride-on trowel to move forward in a straight line.	
Left and Right	Move Both Joysticks Backward	Causes the ride-on trowel to move backward in a straight line.	
Right	Move Joystick Right	Causes the ride-on trowel to move to the right.	
Right	Move Joystick Left	Causes the ride-on trowel to move to the left	

The foot pedal (Figure 13) solely controls blade speed.
 The position of the foot pedal determines the blade speed.
 Slow blade speed is obtained by slightly depressing the pedal. Maximum blade speed is obtained by fully depressing the pedal.

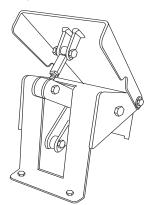

Figure 13. Blade Speed Control Foot Pedal

## **HTH44T— INITIAL START-UP**

2. Push both the left and right joysticks forward (Figure 14).

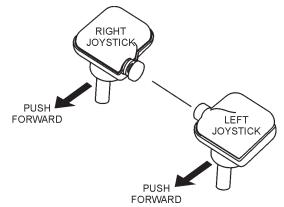

Figure 14. Joystick Control Forward Direction

- With your right foot slowly depress the right foot pedal halfway. Notice that the ride-on power trowel begins to move in a forward direction. Release both joystick controls to stop forward movement then remove your right foot from the right foot pedal.
- 4. Practice holding the machine in one place as you increase blade speed. When about 75% of maximum blade speed has been reached, the blade will be moving at proper finishing speed. The machine may be difficult to keep in one place. Trying to keep the ride-on trowel stationary is a good practice for operation.
- Practice maneuvering the Ride-on Power Trowel using the information listed in Table 3. Try to practice controlled motions as if you were finishing a slab of concrete. Practice edging and covering a large area
- Try adjusting the pitch of the blades. This can be done
  with the ride-on trowel stopped or while the trowel is
  moving, whatever feels comfortable. Test the operation
  of optional equipment like retardant spray and lights if
  equipped.

 Push both the left and right joysticks backward (Figure 15) and repeat steps 3 through 6 while substituting the word reverse for forward.

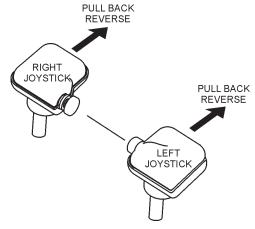

Figure 15. Joystick Control Reverse Direction

#### **Engine Shut-Down**

 Return the speed control lever (Figure 7) to low idle, and allow the engine to idle for 5 minutes.

#### NOTE

Failure to allow the engine to idle for 5 minutes before shutting engine *OFF* may lead to turbocharger damage.

- 2. Turn the ignition key counter-clockwise to the "starter switch contact" position, then remove the key.
- 3. Clean and remove any foreign debris from the trowel.

## **HTH44T— MAINTENANCE**

#### NOTE

See the engine manual supplied with your machine for appropriate engine maintenance schedule and troubleshooting guide for problems.

At the front of the book (Page 7) there is a "Daily Pre-Operation Checklist". Make copies of this checklist and use it on a daily basis.

#### CAUTION!

Disconnect spark plug wires and battery cables before attempting any service or maintenance on the Ride-on Power Trowel.

**ALWAYS** allow the engine to cool before servicing. **NEVER** attempt any maintenance work on a hot! (muffler, radiator, etc.) trowel.

#### MAINTENANCE SCHEDULE

<u>Change</u> the *hydraulic oil* and *filter* after the first 100 hours of use, then change every 250 hours.

#### Daily (8-10 Hours)

 Check the fluid levels in the engine and reservoir, fill as necessary.

#### Weekly (30-40 Hours)

- 1. Relube arms, thrust collar and clutch
- 2. Replace blades if necessary.
- 3. Check and clean or replace the engine air filter as necessary.
- 4. Replace engine oil and filter as necessary, see engine manual.

#### Monthly (100-125 Hours)

1. Remove, clean, reinstall and relube the arms and thrust collar. Adjust the blade arms.

#### **Yearly (500-600 Hours)**

- Check and replace if necessary the arm bushings, and thrust collar bushings.
- Check pitch control cables for wear.
- 3. Adjust blade speed.
- 4. Replace hydraulic fluid and both hydraulic filters.

#### NOTE

<u>Change</u> the *hydraulic oil* and *filter* after the first 100 hours of use, then change every 250 hours.

#### **MAINTENANCE PROCEDURES**

#### Checking/Adjusting Blade Speed

Because the two hydraulic drive motors operate independent of each other, the blade speed between them may vary. If the unit's steering is difficult to control, the blade speeds may need to be checked, or if the spider is spinning noticeably faster or slower than the other side, the blade speed may need to be checked. It is also recommended that the blade speed be checked at least once a year.

Blade speed adjustment is a two-step process. First, the left spider's speed should be checked and/or adjusted. Second, the right spider's speed should be adjusted to match the left.

#### **Left Spider Speed Adjustment**

The left spider's speed is adjusted by changing the length of the rod end spacing (Figure 16) at the front of the foot pedal. Lengthening the spacing increases the blade speed; shortening the spacing decreases the blade speed.

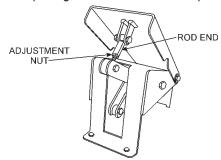

Figure 16. Blade Speed Control Foot Pedal

#### **Right Spider Speed Adjustment**

The right spider's speed is adjusted by changing the length of the connecting rod on the pump actuation levers (Figure 17, Page 21). This rod is basically a turnbuckle. Rotating it in one direction increases the length and corresponding spider speed. Rotating it the opposite direction decreases the length and spider speed. The right spider's speed should be within 3 rpm of the left.

A good starting point in the adjustment process is to adjust the rod such that both spiders begin to rotate at the same time when the foot pedal is slowly depressed. This will, generally, get the speeds fairly close. Close enough for use if instrumentation is unavailable (i.e. on the job site). From this point on, some form of instrumentation is required to verify that the right spider speed is within the tolerance specified above. A strobe or magnetic pickup type speed indicator is recommended to verify the speeds.

The speeds should be adjusted on a dry concrete floor with the blades pitched flat. Units with a Kubota turbocharged engine should be set at 155-160 rpm with the engine at full speed.

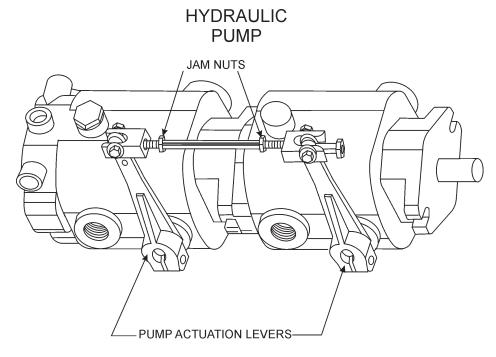

Figure 17. Pump Actuation Levers/Speed Control Rod

#### Matching Blade Pitch for Both Sets of Blades

Sometimes it may be necessary to match blade pitch between the two sets of blades. There are some signs that this may be necessary. For example, the differences in pitch could cause a noticeable difference in finish quality between the two sets of blades. Or, the difference in blade pitch could make the machine difficult to control. This is due to the surface area in contact with the concrete (the blade set with the greater contact area tends to stick to the concrete more).

To fix this problem, each spider assembly can be pitched individually. With a Single Pitch machine, the operator is forced to constantly make adjustments on each pitch tower. On a Twin Pitch machine, the operator must lift up on one of the pitch control handles, disengaging the linkage between the towers. Once this is done, a pitch control crank can be turned to adjust the difference. Make sure to lock the linkage back in place when finished with adjustments.

#### **Blade Pitch Adjustment Procedure**

The maintenance adjustment of blade pitch is an adjustment that is made by a bolt (Figure 18) on the arm of the trowel blade finger. This bolt is the contact point of the trowel arm to the lower wear plate on the thrust collar. The goal of adjustment is to promote consistent blade pitch and finishing quality.

There are some things to look for when checking to see if adjustment is necessary. Is the machine wearing out blades unevenly (i.e. one blade is completely worn out while the others look new)? Does the machine have a perceptible rolling or bouncing motion when in use? Look at the machine while it is running, do the guard rings "rock up and down" relative to the ground? Do the pitch control towers rock back and forth? These are some of the indications that the blade pitch may need to be adjusted using the adjustment bolts on the trowel blade finger.

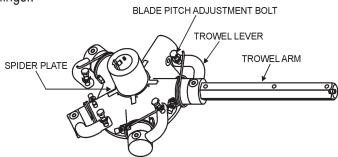

Figure 18. Blade Pitch Adjustment Bolt

## **HTH44T— MAINTENANCE**

The easiest and most consistent way to make this adjustment is to use the Trowel Arm Adjustment Fixture (P.N. 9177) that is manufactured by Whiteman. This fixture will allow consistent adjustment of the trowel arm fingers. It comes with all the hardware necessary to properly accomplish this maintenance and instructions on how to properly utilize this tool. Adjusting the trowel arm fingers without a fixture requires a special talent.

If a trowel arm adjustment fixture is not available and immediate adjustment is necessary; we suggest the following procedure. If you can see or feel which blade is pulling harder, adjust the bolt that corresponds to that blade. Another way to determine which blades need adjustment is to place the machine on a flat surface and pitch the blades as flat as possible. Now, look at the adjustment bolts. They should all barely make contact with the lower wear plate on the spider. If you can see that one of them is not making contact; some adjustment will be necessary.

It will be possible to adjust the "high" bolts down to the level of the one that is not touching, or adjust the "low" bolt up to the level of the higher ones. If possible, adjust the low bolt up to the level of the rest of the bolts. This is the fastest way, but may not always work. Verify that after adjustment, the blades pitch correctly. Often times, if the blades are incorrectly adjusted, they will not be able to pitch flat. This occurs when the adjusting bolts have been raised too high. Conversely, sometimes the adjusting bolts are too low and the blades cannot be pitched high enough for finishing operations.

#### **Changing A Blade**

Whiteman recommends that all the blades on the entire machine be changed at the same time. If only one or some of the blades are changed at one time, the machine will not finish concrete consistently and the machine may wobble or bounce.

- Place the machine on a flat, level surface. Adjust the blade pitch control to make the blades as flat as possible. Note the blade orientation on the trowel arm. This is important for ride-on trowels as the two sets of blades counterrotate. Lift the machine up, placing blocks under the main guard ring to support it.
- Remove the bolts and lock washers on the trowel arm, and then remove the blade.
- 3. Scrape all concrete and debris from the trowel arm. This is important to properly seat the new blade.
- 4. Install the new blade, maintaining the proper orientation for direction of rotation.
- 5. Affix the bolts and lock washers.
- 6. Repeat steps 2-5 for all remaining blades.

#### HTH44T— MAINTENANCE

#### **Checking Hydraulic Pressure**

It should be mentioned that most hydraulic problems are a result of low fluid levels. Before checking any other possibilities, make sure the hydraulic fluid level is half way up the sight glass which is located at the right end of the frame.

Hydraulic pressure can be checked using a pressure gauge (Figure 19) with a range of at least 5,000 psi. Two male diagnostic quick couplers (one for each pump) are located in the elbow fittings (Figure 19) at the front of the pump. It is best to use two gauges simultaneously, but it is possible to use only one gauge and repeat the procedure for each side.

To fully test the hydraulic system, the spiders will need to be locked so that they cannot rotate. This can easily be done by wrapping a chain around an arm on each spider, thus chaining them together in the back of the trowel.

Once the pressure gauges are installed and the spiders chained together, the system can be checked.

With the foot pedal in the idle position and the engine at full speed, the pressure should be 200 to 300 psi. If the pressure is less than 200 psi, the charge system may need to be inspected and/ or serviced. In particular, the suction filter and charge pump relief valve should be checked. The suction filter may be plugged, or the relief valve may be stuck. Either condition may cause low charge pressure.

With the engine at 50% to 70% of full speed, and spiders chained together, slowly depress the foot pedal and read the gauges. The pressure should get to at least 3,100 psi. If the pressure will not attain 3,100 psi, the pump should be inspected and/or serviced by an authorized service representative.

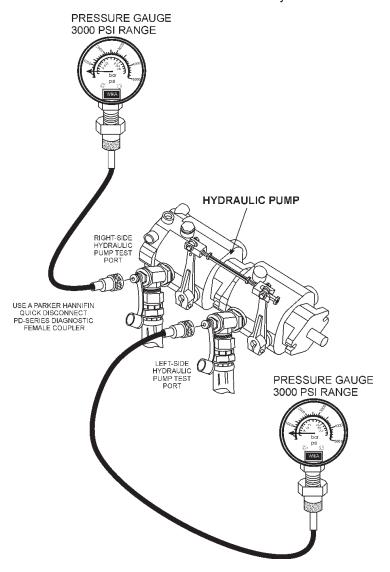

Figure 19. Pressure Gauge (Hydraulic Pump)

#### **Checking Steering Pressure**

Lift the hinged radiator access cover and insert the test pressure gauge (300 to 600 PSI) as shown in Figure 20 into the left steering valve's diagnostic quick coupler.

Run the engine at full RPM. The left steering valve's factory setting is 145 PSI, however some operators may prefer a more responsive steering (higher pressure required) and some operators may prefer a "softer feel" (lower pressure required).

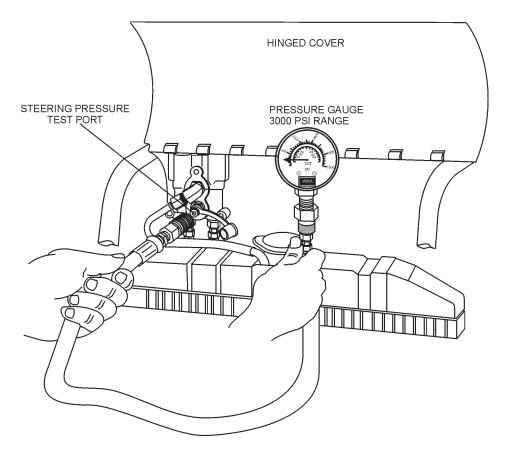

Figure 20. Pressure Gauge (Left Steering Valve)

## **HTH44T— MAINTENANCE**

#### **Steering Pressure Adjustment**

On the steering pressure relief valve use an open-end wrench to loosen the jam nut and an allen-wrench to adjust the steering pressure to the desired setting somewhere between 115 and 180 PSI. Retighten the jam nut.

The steering pressure should be checked with the engine at full RPM. It is not necessary to move either steering control during the pressure test.

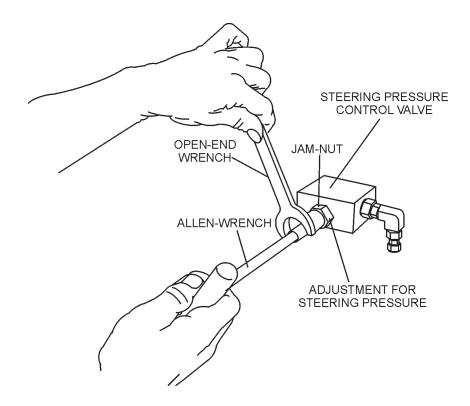

Figure 21. Steering Pressure Adjustment

## HTH44T—TROUBLESHOOTING

TABLE 4. TROUBLESHOOTING		
SYMPTOM	POSSIBLE PROBLEM	SOLUTION
	Kill switch malfunction?	Make sure that the kill switch is functioning when the operator is seated; replace switch if necessary.
Engine running rough or not at all.	Fuel?	Look at the fuel system. Make sure there is fuel being supplied to the engine. Check to ensure that the fuel filter is not clogged.
	Ignition?	Check to ensure that the ignition switch has power and is functioning correctly.
	Other problems?	Consult engine manufacturer's manual.
Safety kill switch not functioning.	Loose wire connections?	Check wiring. Replace as necessary.
	Bad contacts?	Replace switch.
	Blades?	Make certain blades are in good condition, not excessively worn. Finish blades should measure no less than 2" (50mm) from the blade bar to the trailing edge, combo blades should measure no less that 3.5" (89mm). Trailing edge of blade should be straight and parallel to the blade bar.
	Spider?	Check that all blades are set at the same pitch angle as measured at the spider. A field adjustment tool is available for height adjustment of the trowel arms (see Optional Equipment).
	Bent trowel arms?	Check the spider assembly for bent trowel arms. If one of the arms is even slightly bent, replace it immediately.
If trowel "bounces, rolls concrete, or makes uneven swirls in concrete".	Trowel arm bushings?	Check the trowel arm bushings for tightness. This can be done by moving the trowel arms up and down. If there is more than 1/8" (3.2 mm) of travel at the tip of the arm, the bushings should be replaced. All bushings should be replaced at the same time.
	Thrust collar?	Check the flatness of the thrust collar by rotating it on the spider. If it varies by more than 0.02" (0.5 mm) replace the thrust collar.
	Thrust collar bushing?	Check the thrust collar by rocking it on the spider. If it can tilt more than 1/16" (1.6 mm) [as measured at the thrust collar O.D.], replace the bushing in the thrust collar.
	Thrust bearing worn?	Check the thrust bearing to see that it is spinning free. Replace if necessary.
	Blade pitch?	Check blades for consistent pitch. Adjust per Maintenance section instructions if necessary.
Machine has a perceptible rolling motion while running.	Main shaft?	The main output shaft of the gearbox assembly should be checked for straightness. The main shaft must run straight and cannot be more than 0.003" (0.08 mm) out of round at the spider attachment point.
- 0	Yoke?	Check to make sure that both fingers of the yoke press evenly on the wear cap. Replace yoke as necessary.

## HTH44T—TROUBLESHOOTING

TABLE 4. TROUBLESHOOTING (CONTINUED)		
SYMPTOM	POSSIBLE PROBLEM	SOLUTION
Lights (optional) not working.	Wiring?	Check all electrical connections, including the master on/off switch and check to see if wiring is in good condition with no shorts. Replace as necessary.
	Lights?	Check to see if light bulbs are still good. Replace if broken.
	Retardant?	Check the tank to make sure retardant is present. Fill tank as necessary.
Retardant spray (optional) not	Wiring?	Check all electrical connections, including master on/off switch connections. Replace components and wiring as necessary.
working.	Bad switch?	Check the continuity of master on/off switch. Replace if broken.
	Bad spray pump?	If pump has a voltage present when the switch is turned on, but does not operate and electrical connections to the pump are good, replace the pump.
	Blade speed out of adjustment?	See section on blade speed adjustment.
	Worn components?	Check for wear of steering bearings and linkage components replace if necessary.
Steering is unresponsive.	Pivots?	Check to ensure free movement of hydraulic drive motors.
	Hydraulic pressure?	Check to ensure that hydraulic pressure is adequate. See section on checking hydraulic pressure.
Operating position is uncomfortable.	Seat adjust for operator?	Adjust seat with lever located on the front of the seat.
Linkage on Twin Pitch (optional)	Crank handles?	Make sure that both crank handles are pushed down as far as possible. Doing this ensures that the linkage is engaged.
not working.	Broken part?	Replace all broken parts immediately.

## HTH44T— EXPLANATION OF CODE IN REMARKS COLUMN

The following section explains the different symbols and remarks used in the Parts section of this manual. Use the help numbers found on the back page of the manual if there are any questions.

#### **NOTICE**

The contents and part numbers listed in the parts section are subject to change **without notice**. Multiquip does not guarantee the availability of the parts listed.

#### SAMPLE PARTS LIST

NO.	PART NO.	PART NAME	QTY.	<u>REMARKS</u>
1	12345	BOLT	1	INCLUDES ITEMS W/%
2%		WASHER, 1/4 IN	١	NOT SOLD SEPARATELY
2%	12347	WASHER, 3/8 IN	۱1	MQ-45T ONLY
3	12348	HOSE	A/R	MAKE LOCALLY
4	12349	BEARING	1	S/N 2345B AND ABOVE

#### NO. Column

**Unique Symbols** — All items with same unique symbol

(@, #, +, %, or >) in the number column belong to the same assembly or kit, which is indicated by a note in the "Remarks" column.

**Duplicate Item Numbers** — Duplicate numbers indicate multiple part numbers, which are in effect for the same general item, such as different size saw blade guards in use or a part that has been updated on newer versions of the same machine.

#### **NOTICE**

When ordering a part that has more than one item number listed, check the remarks column for help in determining the proper part to order.

#### PART NO. Column

**Numbers Used** — Part numbers can be indicated by a number, a blank entry, or TBD.

TBD (To Be Determined) is generally used to show a part that has not been assigned a formal part number at the time of publication.

A blank entry generally indicates that the item is not sold separately or is not sold by Multiquip. Other entries will be clarified in the "Remarks" Column.

#### QTY. Column

**Numbers Used** — Item quantity can be indicated by a number, a blank entry, or A/R.

A/R (As Required) is generally used for hoses or other parts that are sold in bulk and cut to length.

A blank entry generally indicates that the item is not sold separately. Other entries will be clarified in the "Remarks" Column.

#### REMARKS Column

Some of the most common notes found in the "Remarks" Column are listed below. Other additional notes needed to describe the item can also be shown.

**Assembly/Kit** — All items on the parts list with the same unique symbol will be included when this item is purchased.

Indicated by:

"INCLUDES ITEMS W/(unique symbol)"

**Serial Number Break** — Used to list an effective serial number range where a particular part is used.

Indicated by:

"S/N XXXXX AND BELOW"

"S/N XXXX AND ABOVE"

"S/N XXXX TO S/N XXX"

**Specific Model Number Use** — Indicates that the part is used only with the specific model number or model number variant listed. It can also be used to show a part is NOT used on a specific model or model number variant.

Indicated by:

"XXXXX ONLY"

"NOT USED ON XXXX"

"Make/Obtain Locally" — Indicates that the part can be purchased at any hardware shop or made out of available items. Examples include battery cables, shims, and certain washers and nuts.

"Not Sold Separately" — Indicates that an item cannot be purchased as a separate item and is either part of an assembly/kit that can be purchased, or is not available for sale through Multiquip.

### TERMS AND CONDITIONS OF SALE — PARTS

#### **PAYMENT TERMS**

Terms of payment for parts are net 30 days.

#### **FREIGHT POLICY**

All parts orders will be shipped collect or prepaid with the charges added to the invoice. All shipments are F.O.B. point of origin. Multiquip's responsibility ceases when a signed manifest has been obtained from the carrier, and any claim for shortage or damage must be settled between the consignee and the carrier.

#### MINIMUM ORDER

The minimum charge for orders from Multiquip is \$15.00 net. Customers will be asked for instructions regarding handling of orders not meeting this requirement.

#### RETURNED GOODS POLICY

Return shipments will be accepted and credit will be allowed, subject to the following provisions:

- A Returned Material Authorization must be approved by Multiquip prior to shipment.
- To obtain a Return Material Authorization, a list must be provided to Multiquip Parts Sales that defines item numbers, quantities, and descriptions of the items to be returned.
  - The parts numbers and descriptions must match the current parts price list
  - The list must be typed or computer generated.
  - The list must state the reason(s) for the return.
  - d. The list must reference the sales order(s) or invoice(s) under which the items were originally purchased.
  - e. The list must include the name and phone number of the person requesting the RMA.
- 3. A copy of the Return Material Authorization must accompany the return shipment.
- Freight is at the sender's expense. All parts must be returned freight prepaid to Multiquip's designated receiving point.

- Parts must be in new and resalable condition, in the original Multiquip package (if any), and with Multiquip part numbers clearly marked.
- 6. The following items are not returnable:
  - a. Obsolete parts. (If an item is in the price book and shows as being replaced by another item, it is obsolete.)
  - b. Any parts with a limited shelf life (such as gaskets, seals, "O" rings, and other rubber parts) that were purchased more than six months prior to the return date.
  - Any line item with an extended dealer net price of less than \$5.00.
  - d. Special order items.
  - e. Electrical components.
  - f. Paint, chemicals, and lubricants.
  - g. Decals and paper products.
  - h. Items purchased in kits.
- 7. The sender will be notified of any material received that is not acceptable.
- Such material will be held for five working days from notification, pending instructions. If a reply is not received within five days, the material will be returned to the sender at his expense.
- Credit on returned parts will be issued at dealer net price at time of the original purchase, less a 15% restocking charge.
- In cases where an item is accepted, for which the original purchase document can not be determined, the price will be based on the list price that was effective twelve months prior to the RMA date.
- Credit issued will be applied to future purchases only.

#### PRICING AND REBATES

Prices are subject to change without prior notice. Price changes are effective on a specific date and all orders received on or after that date will be billed at the revised price. Rebates for price declines and added charges for price increases will not be made for stock on hand at the time of any price change.

Multiquip reserves the right to quote and sell direct to Government agencies, and to Original Equipment Manufacturer accounts who use our products as integral parts of their own products.

#### SPECIAL EXPEDITING SERVICE

A \$35.00 surcharge will be added to the invoice for special handling including bus shipments, insured parcel post or in cases where Multiquip must personally deliver the parts to the carrier.

#### LIMITATIONS OF SELLER'S LIABILITY

Multiquip shall not be liable hereunder for damages in excess of the purchase price of the item with respect to which damages are claimed, and in no event shall Multiquip be liable for loss of profit or good will or for any other special, consequential or incidental damages.

#### LIMITATION OF WARRANTIES

No warranties, express or implied, are made in connection with the sale of parts or trade accessories nor as to any engine not manufactured by Multiquip. Such warranties made in connection with the sale of new, complete units are made exclusively by a statement of warranty packaged with such units, and Multiquip neither assumes nor authorizes any person to assume for it any other obligation or liability whatever in connection with the sale of its products. Apart from such written statement of warranty, there are no warranties, express, implied or statutory, which extend beyond the description of the products on the face hereof.

Effective: February 22, 2006
